

HAMSE SAED ABDI MOHAMED

Software Engineer | Full-Stack Developer

Hargeisa, Somaliland | +252 63 399 6646 | hamsesaed@gmail.com

PROFESSIONAL PROFILE

Software Engineering graduate and full-stack developer with practical, hands-on experience across the web development lifecycle — from responsive frontend interfaces to backend services, database design, and REST API integration. Approximately three years of experience building and maintaining web applications using JavaScript, React.js, Python, Node.js, and relational and non-relational databases (SQL, PostgreSQL, MongoDB), with additional project experience in Flutter/Dart. Comfortable working across the stack, including connecting frontend applications to backend services, implementing authentication, and troubleshooting issues to deliver stable, functional systems. Work also spans computer vision and digital transformation, including an Automatic Number Plate Recognition (ANPR) project and a current major project, an integrated quality-control system for a national regulatory commission, reflecting readiness for government and public-sector technology work.

PROFESSIONAL EXPERIENCE

Full-Stack Developer

2021 – 2024

Hogaan Technology Center

- Developed and maintained responsive web applications using JavaScript, React.js, HTML, and CSS, translating requirements into functional, user-friendly interfaces.
- Built and maintained backend services and REST APIs using Python and Node.js to support application logic and data processing.
- Integrated frontend applications with backend services, ensuring reliable data flow and consistent application behavior.
- Designed and worked with database structures using SQL, PostgreSQL, and MongoDB to support application functionality.
- Implemented authentication and access-control features to help secure application resources.
- Debugged and troubleshooted issues across frontend, backend, and database layers to improve application stability and performance.
- Used Git/GitHub for version control and collaborative code management throughout the development process.
- Worked across different parts of the development process, from implementing interfaces to connecting applications with backend services.

Marketing

6 months

Somtel

- Supported marketing activities and campaigns, contributing to promotional efforts and brand communication.
- Collaborated with colleagues to prepare marketing materials and coordinate outreach.
- Gained practical experience in professional communication and teamwork within a corporate environment.

EDUCATION

Bachelor of Software Engineering

Completed, 2026

Gollis University

Official university completion testimonial available; degree certificate pending issuance.

ADDITIONAL EDUCATION

Secondary School — Macrif Secondary School, 2018 – 2019

Primary School — Sheikh Bashir Primary School, 2015 – 2016

Diploma in Computer — Tisqaad Center of IT

TECHNICAL SKILLS

Frontend

HTML, CSS, JavaScript, React.js, Responsive Web Development

Backend

Python, Node.js, REST APIs

Tools

Git, GitHub, VS Code

Databases

SQL, PostgreSQL, MongoDB, Supabase

Programming / Other

C, C++, C#, Java, Dart

Networking

CCNA knowledge; currently developing networking knowledge beyond CCNA

Additional Technologies

Flutter, Authentication, API Integration, Database Design

KEY PROJECTS

SQCC Integrated Quality Control Management System

Current

Somaliland Quality Control Commission — Software Engineering Project

An integrated digital system designed to support the full lifecycle of regulated products entering Somaliland, connecting importers, inspectors, laboratory activities, and regulatory approval through structured, traceable workflows.

- Importer and shipment registration with structured digital record-keeping
- Document submission and verification workflows
- Product inspection and laboratory testing tracking
- Multi-level approval workflows across regulatory stages
- Product traceability and QR-based public product verification
- Designed around a connected shipment record, so information can be followed across regulatory stages

Technologies: React.js, Python/Flask, PostgreSQL, REST APIs, Authentication

ANPR — Automatic Number Plate Recognition System

A computer vision project focused on automatically detecting and recognizing vehicle license plates from images, applying image processing techniques to a practical automation problem relevant to traffic monitoring and security use cases.

- Worked on automatic number-plate detection and recognition from images
- Explored computer-vision and OCR techniques for extracting plate information
- Designed a workflow for recording recognized plates with time, location, and violations

Area: Computer Vision / Image Processing

Fitness Website

A responsive web application demonstrating frontend development skills, including interface design, layout structuring, and usability across devices.

- Built responsive interfaces for different screen sizes
- Implemented structured page layouts and user interactions

Area: Web Development / Frontend

Quiz Web Application

An interactive web application featuring dynamic content, user-interaction handling, and application logic for a quiz-taking experience.

- Implemented quiz-taking functionality and application logic
- Worked with dynamic content and user interactions

Area: Web Development

CERTIFICATIONS / DOCUMENTATION

University Completion Testimonial

Gollis University

Confirms completion of the Bachelor of Software Engineering program; official degree certificate pending issuance.
